LEWIS

Sealtite Quick-Set[®]

Hook Bolt System

This new system is simple yet has many advantages over the current hook bolting system. Here are just a few of the benefits:

- **Very fast installation**
- **Extremely safe to install**
- **No drilling of holes for hook bolts** – This commonly causes cracks and shortens tie life
- **Easy to visually inspect** – Just a quick glance shows the system is secured to the deck as designed
- **Achieve full grip against the flange** – See photo. Because the new Hook Bolt is angled inward 15 degrees, there is no movement either vertically or laterally
- **No need for the Washer Nut Combo**
- **Built in (optional) tie spacer going downward**, with holes on top of bracket for Recessed Head Timber Screws providing added tie security
